

Base data: wildtype cell G

$H = F_\theta(G)$, encoded once

delete $g_2 \Rightarrow$ rebuild graph G_p

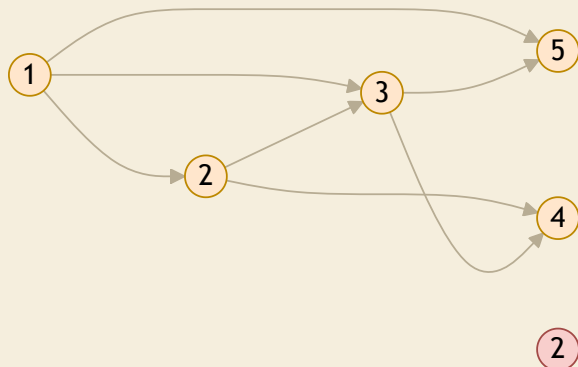

Perturb data (GNN): node 2 removed

$\hat{y} = \Phi(G_p)$

delete $g_2 \Rightarrow$ token, graph unchanged

Perturb representation (CGT): graph unchanged, g_2 as token

$\hat{y} = R_\phi(T_\psi(H, p))$

$\Phi(G_p) \approx R_\phi(T_\psi(H, p))$
