
the vector as log(1 + |v|), default initialization
layer-free log1p, pFBA store, clamp columns dropped
the round-33 cell over the growth program's dual-simplex vertex (store by HiGHS simplex)
layer-free log1p, vertex store, clamp columns dropped
layer-free log1p, vertex store, 25 widest clamp columns dropped
layer-free log1p, vertex store, 100 widest clamp columns dropped
layer-free log1p, vertex store, as many non-clamp columns dropped
a
validation AUROC
epoch
b
median |step|, validation AUROC
158
labeled validation genes
c
held-out AUROC (195 genes)
FBA shipped
FBA SM
FBA SC
