

■ a measured value (the public screens, the Bioscreen wells)
 ■ model-free rule: the mean of the single-compound profiles
 ■ learned on chemistry features (ridge, kernel ridge, nearest neighbor)

■ model-free rule: Bliss independence (the product of the singles)
 ■ model-free rule: Loewe additivity (the dose-equivalent sum)
 ■ learned by the cell graph transformer

■ model-free rule: the highest single agent

**a** ✕ ●

the task: a compound as a token the genes read

**b** ✕ ●

what is trained on, and what is held back

**c** ✕ ●

how a model is scored, and against what

**d** ✕ ●

the ladder on the corrected store: the ten best arms

**e** ✕ ●

which model predicts an unseen compound's profile

**f** ✕ ●

the learning curve in compounds

**g** ✕ ●

dose: the same compound in two media

**h** ✕ ●

the composition rule on public pairs

the predicted profile against the measured

**j** ✕ ●

the six single-agent titrations

**k** ✕ ●

the combinations that grew, against the two rules

the three isobole grids

section status ✕ not done, agents may edit freely

■ author-reviewed ■ final
