color, the input family the gene's own sequence (genotype only) the strain's measured phenotype as input (transductive) permuted or nothing fitted (control)

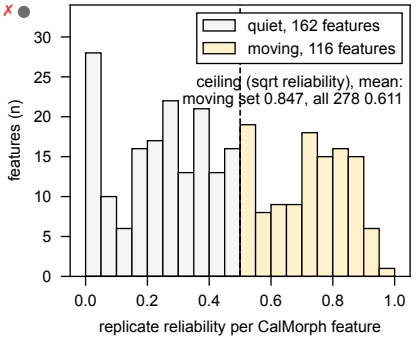

regime shaded band: transductive, needs a measurement of the strain itself; unshaded: inductive, the genotype alone

a ✗ ●

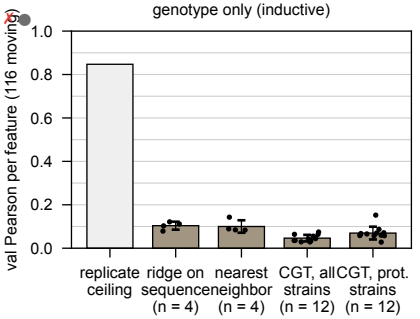

The strain sets

single-gene deletions with a label: morphology (Ohya 2005, CalMorph) 4,695; expression (Kemmeren 2014, Sameith 2015) 1,554; proteome (Messner 2023) 4,476. with two labels: morphology and expression 1,439; morphology and proteome 4,281; all three 1,321. genotype-only arms train on 3,757 strains; the expression-input arms on 1,161; the proteome-input arms on 3,464.

d ✗ ◐

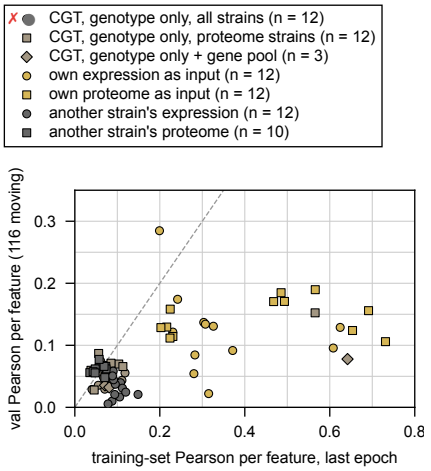

e ✗ ◐

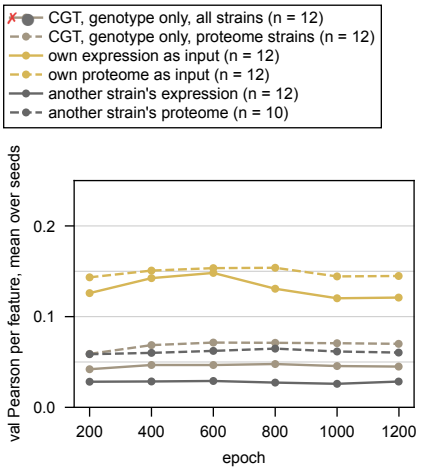

transductive: the strain's own measurement as input

f ✗ ●

g ✗ ●

h ✗ ○

More training strains for the measured modalities: the 1,011 natural isolates (Peter 2018). Not a morphology panel (no CalMorph on these strains); Caudal 2024 expression (served, 943 isolates) and Muenzner 2024 proteome (next build, 796) as extra training data for the measured-input arms of d. **Idea only; likely not in time for this round.**
