

■ a measured value (the public screens, the Bioscreen wells)
 ■ learned on chemistry features (ridge, kernel ridge, nearest neighbor)
 ■ gene-mean or permutation control, and chance

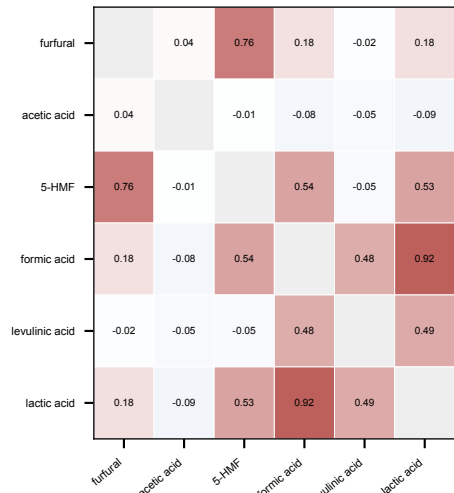

a ✗ ●
emergent and masked genes, against the pair's own similarity

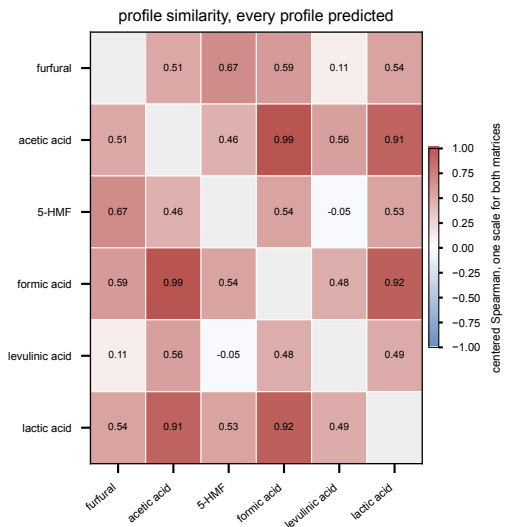

b ✗ ●
the weight on the first single, across one dose grid

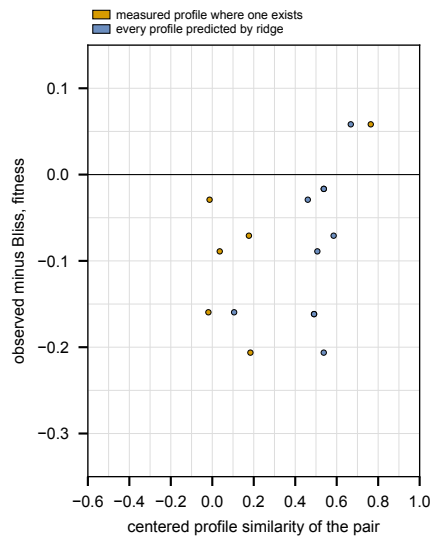

c ✗ ●
profile similarity, measured where one exists

d ✗ ●

e ✗ ●
similarity against deviation, both profile versions

f ✗ ●
the GO read, and the control that explains it
