

expression difficult in reproducibility

Expression - Sameita, Kermarven
Singles + Doubles

hict 1 hict 2 Corr

morphology intro + selection of criterion

Chya Morphology + ft select

Interpolation: for single **gene del** if you know morph does it help with expression and vice versa - include fitness

Exp. say about morph - vice versa
Interp

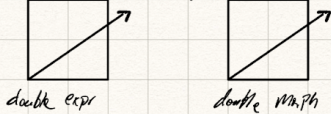

If you know expression, you know morph

Extrapolation: can assess for double mutants - morphology in the dark a bit

Inference on DW and Expr. Morph.

Extrap

Interpretation of double ko expression ?

Int. Double Expr
probably too hard

Interpretation of double ko morph ?

Int. Double Morph Pred
Can probably split into 2

Interpretation

Trends

- What is a sick morphology
look @ fitness cur
- how do sick cell compensate
look at expression

Performance - pred v actual

1. expression
2. morphology

Move 3 c.

Visualization of gene embedding
