

Maximum full-width figure area

180 mm wide × 170 mm tall

draw.io (100 units/inch, 1 mm = 3.94 units):

709 × 669 units (full width × max height)

single column 88 mm = **347 units** wide (4 mm gutter)

Design AT this size, fonts 6–7 pt, then:

`\includegraphics[width=\textwidth]{figures/fig.pdf}`

(scale ≈ 1 , so 6–7 pt text stays 6–7 pt)

Caption headroom below: text height 247 mm – 170 mm figure
= **~77 mm** (≈ 23 lines at 8 pt) — legend fits same page.

Fig. 1 True-scale Nature Biotechnology figure canvas. This box is the maximum artwork: full width 180 mm = 709 draw.io units; max height 170 mm = 669 units (single column 88 mm = 347 units, 4 mm gutter). The 170 mm cap reserves 77 mm of the 247 mm text height for the legend, so a full-page figure plus caption fit on one page; for a caption longer than 20 lines, set figure height = 247 mm minus the caption height. Build panels to content (real Nature figures are asymmetric) and export at exactly 88 or 180 mm wide.
